AN INTRODUCTION TO COMMANDER MARINE

COMMANDER MARINE has been building fine marine engines for the boating industry for over 15 years. Right from the beginning it has been the philosophy of Dudley Whitman, the founder and president of Commander, to build lightweight, fuel efficient marine power plant which are not over-engineered but in fact are compact, easy-to-work-on engines that can virtually be serviced by the user.

Although a completely new innovation, Commander leads the industry in bringing the marine power of the future to boats today, by using new space age metals and finishes assuring longer engine life.

Commander V-8 gasoline marine power plants are built on the rugged and dependable 302, 351 and 460 cubic inch Ford engines. Built to exacting specifications, Commander engines are light in weight, compact and powerful and are technically advanced and engineered to give maximum engine torque through the entire power range.

Commander engines are available as inboard, inboard/outboard, v-drive, and the new surface piercing drives. Featuring the unique Stainless Steel Exhaust System designed for salt water ocean use and built for outstanding performance.

Commander engines can be found powering patrol boats in outback areas like the Amazon River basin down into the Tierra del Fuego at the south end of South America and from Alaska to Cape Horn. They are used by avid fishermen, water skiing champions, water taxis and discriminating yachtsmen with larger crafts.

Commander Marine engines are sold and serviced world-wide by a network of dealers and installed by leading boat builders.

STANDARD FEATURES

- Stainless steel manifolds
- Compact Marine V-8 smooth and quiet
- Dynamically balanced
- Holley 4 Barrell with electric choke
- Light weight alloy aircraft components
- Approved flame arrestor and silencer
- Marine Alternator 40 Amps - 12 Volts
- 40 Amp Circuit Breaker
- Voltage regulator
- Brass Freeze Plugs
- Oil Filter
- Plastic coated anti corrosion oil pan
- Transmission oil cooler
- Neutral safety switch
- Dual water pump system
- Throttle and transmission connection kit
- Lifting rings
- Adjustable engine mounts
- Runs on regular fuel
- Right and left hand rotation
- Factory hot tested

AVAILABLE OPTIONS

- Borg Warner hydraulic transmission
- Surface drive or outdrive
- Top mounted starter
- Stainless steel special risers and elbows
- Fresh water cooling w/ engine oil cooler
- Remote oil filter
- Oil drain kit
- Audible alarm system
- Deluxe instrument panel
- 10' or 18' wiring harness
- Fuel gauge and hour meter
- Coupling 4" or 5"
- Throttle and shift controls
- Exhaust transom kits
- Shipping crates
